

REVISIONS			
LTR	DESCRIPTION	DATE (YR-MO-DA)	APPROVED
A	Added device types 03, 04, 05, and 06. Added electrical test limits for device types 03, 04, 05, and 06 to table I. Added vendor CAGE code 34335. Editorial changes throughout.	90-05-09	William K. Heckman
B	Added device types 07, 08, 09, and 10. Added electrical parameters testing to table I for device types 07, 08, 09, and 10. Added a new package for device type 07. Editorial changes throughout.	92-03-25	Monica L. Poelking
C	Added vendor CAGE code 0C7V7. Update boilerplate to MIL-PRF-38535 requirements. – LTG	02-12-18	Thomas M. Hess

								SHEET	1 OF 28											

1. SCOPE

1.1 Scope. This drawing describes device requirements for MIL-STD-883 compliant, non-JAN class level B microcircuits in accordance with MIL-PRF-38535, appendix A.

1.2 Part or Identifying Number (PIN). The complete PIN is as shown in the following example:

1.2.1 Device type(s). The device type(s) identify the circuit function as follows:

<u>Device type</u>	<u>Generic number</u>	<u>Frequency</u>	<u>Circuit function</u>
01	Z85C3006	6.0 MHz	Serial communication controller
02	Z85C3008	8.0 MHz	Serial communication controller <u>2/</u>
03	AM85C30-10	10.0 MHz	Serial communication controller with SDLC enhancements <u>1/</u>
04	AM85C30-12	12.0 MHz	Serial communication controller with SDLC enhancements
05	AM85C30-16	16.0 MHz	Serial communication controller with SDLC enhancements <u>1/</u>
06	AM85C30-08	8.0 MHz	Serial communication controller with SDLC enhancements <u>1/</u>
07	Z85C3010	10.0 MHz	Serial communication controller <u>3/</u>
08	Z8523010	10.0 MHz	Serial communication controller with SDLC enhancements <u>1/</u>
09	Z8523016	16.0 MHz	Serial communication controller with SDLC enhancements <u>1/</u>
10	Z8523008	8.0 MHz	Serial communication controller with SDLC enhancements <u>1/</u>

1.2.2 Case outline(s). The case outline(s) are as designated in MIL-STD-1835 and as follows:

<u>Outline letter</u>	<u>Descriptive designator</u>	<u>Terminals</u>	<u>Package style</u>
Q	GDIP1-T40 or CDIP2-T40	40	Dual-in-line package
X	GQCC1-J44	44	Square "J" lead chip carrier
Y	CQCC1-N44	44	Square leadless chip carrier

1.2.3 Lead finish. The lead finish is as specified in MIL-PRF-38535, appendix A.

1/ Device types 03, 05, 06, 08, 09, and 10 are not functionally identical.

2/ Device type 02 is not functionally identical with device types 06 or 10.

3/ Device type 07 is not functionally identical with device types 03 or 08.

STANDARD MICROCIRCUIT DRAWING DEFENSE SUPPLY CENTER COLUMBUS COLUMBUS, OHIO 43216-5000	SIZE A		5962-88689
		REVISION LEVEL C	SHEET 2

1.3 Absolute maximum ratings.

V _{CC} supply voltage range (referenced to ground).....	-0.3 V dc to +7.0 V dc
Voltage on any pin (referenced to ground).....	-0.3 V dc to +7.0 V dc
Storage temperature range (T _{STG}).....	-65°C to +150°C
Maximum power dissipation (P _D).....	0.5 W
Lead temperature (soldering, 10 seconds)	+270°C
Maximum operating junction temperature (T _J)	+180°C
Thermal resistance, junction-to-case (θ _{JC})	See MIL-STD-1835

1.4 Recommended operating conditions.

Supply voltage (V _{CC}).....	4.5 V dc minimum to 5.5 V dc maximum
Minimum high level input voltage (V _{IH})	2.2 V dc
Maximum low level input voltage (V _{IL})	0.8 V dc
Frequency of operation:	
Device type 01	0.5 MHz to 6.0 MHz
Device types 02, 06, 10	0.5 MHz to 8.0 MHz
Device types 03, 07, 08	0.5 MHz to 10 MHz
Device type 04	0.5 MHz to 12.5 MHz
Device types 05 and 09	0.5 MHz to 16.4 MHz
Case operating temperature range (T _C)	-55°C to +125°C
Clock rise and fall times:	
Device type 09	5 ns maximum
Device type 05	8 ns maximum
Device types 01, 02, 03, 04, 06, 07, 08, 10	10 ns maximum

2. APPLICABLE DOCUMENTS

2.1 Government specification, standards, and handbooks. The following specification, standards, and handbooks form a part of this drawing to the extent specified herein. Unless otherwise specified, the issues of these documents are those listed in the issue of the Department of Defense Index of Specifications and Standards (DoDISS) and supplement thereto, cited in the solicitation.

SPECIFICATION

DEPARTMENT OF DEFENSE

MIL-PRF-38535 - Integrated Circuits, Manufacturing, General Specification for.

STANDARDS

DEPARTMENT OF DEFENSE

MIL-STD-883 - Test Method Standard Microcircuits.
 MIL-STD-1835 - Interface Standard Electronic Component Case Outlines.

HANDBOOKS

DEPARTMENT OF DEFENSE

MIL-HDBK-103 - List of Standard Microcircuit Drawings.
 MIL-HDBK-780 - Standard Microcircuit Drawings.

(Unless otherwise indicated, copies of the specification, standards, and handbooks are available from the Standardization Document Order Desk, 700 Robbins Avenue, Building 4D, Philadelphia, PA 19111-5094.)

STANDARD MICROCIRCUIT DRAWING DEFENSE SUPPLY CENTER COLUMBUS COLUMBUS, OHIO 43216-5000	SIZE A		5962-88689
		REVISION LEVEL C	SHEET 3

2.2 Order of precedence. In the event of a conflict between the text of this drawing and the references cited herein, the text of this drawing takes precedence. Nothing in this document, however, supersedes applicable laws and regulations unless a specific exemption has been obtained.

3. REQUIREMENTS

3.1 Item requirements. The individual item requirements shall be in accordance with MIL-PRF-38535, appendix A for non-JAN class level B devices and as specified herein. Product built to this drawing that is produced by a Qualified Manufacturer Listing (QML) certified and qualified manufacturer or a manufacturer who has been granted transitional certification to MIL-PRF-38535 may be processed as QML product in accordance with the manufacturers approved program plan and qualifying activity approval in accordance with MIL-PRF-38535. This QML flow as documented in the Quality Management (QM) plan may make modifications to the requirements herein. These modifications shall not affect form, fit, or function of the device. These modifications shall not affect the PIN as described herein. A "Q" or "QML" certification mark in accordance with MIL-PRF-38535 is required to identify when the QML flow option is used.

3.2 Design, construction, and physical dimensions. The design, construction, and physical dimensions shall be as specified in MIL-PRF-38535, appendix A and herein.

3.2.1 Case outline(s). The case outline(s) shall be in accordance with 1.2.2 herein.

3.2.2 Terminal connections. The terminal connections shall be as specified on figure 1.

3.2.3 Block diagram. The block diagram shall be as specified on figure 2.

3.2.4 Timing waveforms and test circuits. The timing waveforms and test circuits shall be as specified on figure 3.

3.3 Electrical performance characteristics. Unless otherwise specified herein, the electrical performance characteristics are as specified in table I and shall apply over the full case operating temperature range.

3.4 Electrical test requirements. The electrical test requirements shall be the subgroups specified in table II. The electrical tests for each subgroup are described in table I.

3.5 Marking. Marking shall be in accordance with MIL-PRF-38535, appendix A. The part shall be marked with the PIN listed in 1.2 herein. In addition, the manufacturer's PIN may also be marked as listed in MIL-HDBK-103 (see 6.6 herein). For packages where marking of the entire SMD PIN number is not feasible due to space limitations, the manufacturer has the option of not marking the "5962-" on the device.

3.5.1 Certification/compliance mark. A compliance indicator "C" shall be marked on all non-JAN devices built in compliance to MIL-PRF-38535, appendix A. The compliance indicator "C" shall be replaced with a "Q" or "QML" certification mark in accordance with MIL-PRF-38535 to identify when the QML flow option is used.

3.6 Certificate of compliance. A certificate of compliance shall be required from a manufacturer in order to be listed as an approved source of supply in MIL-HDBK-103 and QML-38535 (see 6.6 herein). The certificate of compliance submitted to DSCC-VA prior to listing as an approved source of supply shall affirm that the manufacturer's product meets the requirements of MIL-PRF-38535, appendix A and the requirements herein.

3.7 Certificate of conformance. A certificate of conformance as required in MIL-PRF-38535, appendix A shall be provided with each lot of microcircuits delivered to this drawing.

3.8 Notification of change. Notification of change to DSCC-VA shall be required in accordance with MIL-PRF-38535, appendix A.

3.9 Verification and review. DSCC, DSCC's agent, and the acquiring activity retain the option to review the manufacturer's facility and applicable required documentation. Offshore documentation shall be made available onshore at the option of the reviewer.

$\overline{\text{DCD}}$ or $\overline{\text{CTS}}$ transition to INT valid delay <u>2/ 7/ 18/</u>	t _{dEXT(INT)}		9, 10, 11	10	10	3	8	t _{cPC}
					01,02,03, 04,05,06, 07,08,09	2	6	

- 1/ All tests must be performed under the worst case conditions.
- 2/ Guaranteed to the limit specified herein if not tested.
- 3/ For device types 03, 04, 05, and 06, clock rise and fall times are controlled at approximately 5 ns by the tester.
- 4/ Tested in interrupt acknowledge cycle only.
- 5/ Parameter does not apply to interrupt acknowledge transactions.
- 6/ Float delay is defined as the time required for a ±0.5 V change in the output with a maximum dc load and minimum ac load.
- 7/ Open-drain output, measured with open-drain test load.
- 8/ Applies to versions with SDLC enhancements only.
- 9/ Parameter is system dependent. For any SCC in the daisy chain, t_{dIAI(RD)} must be greater than the sum of t_{dPC(IEO)} for the highest priority device in the daisy chain, t_{sIEI(RDA)} for the SCC, and t_{dIEH(IEO)} for each device separating them in the daisy chain.
- 10/ Parameter applies only between transactions involving the SCC.
- 11/ Rx $\overline{\text{C}}$ is RTxC or TRxC, whichever is supplying the receive clock.
- 12/ Parameter applies only if the data rate is one-fourth the PCLK rate. In all other cases, no phase relationship between Rx $\overline{\text{C}}$ and PCLK or Tx $\overline{\text{C}}$ and PCLK is required.
- 13/ Parameter applies only to FM encoding/decoding.
- 14/ Tx $\overline{\text{C}}$ is TRxC or RTxC, whichever is supplying the transmit clock.
- 15/ Parameter applies only for transmitter and receiver; DPLL and baud rate generator timing requirements are identical to chip PCLK requirements.
- 16/ The maximum receive or transmit data is one-fourth PCLK.
- 17/ Both RTxC and SYNC have 30 pF capacitors to ground connected to them.
- 18/ The value of this parameter is dependent on PCLK cycle time.

4. QUALITY ASSURANCE PROVISIONS

4.1 Sampling and inspection. Sampling and inspection procedures shall be in accordance with MIL-PRF-38535, appendix A.

4.2 Screening. Screening shall be in accordance with method 5004 of MIL-STD-883, and shall be conducted on all devices prior to quality conformance inspection. The following additional criteria shall apply:

a. Burn-in test, method 1015 of MIL-STD-883.

(1) Test condition A, B, C, or D. The test circuit shall be maintained by the manufacturer under document revision level control and shall be made available to the preparing or acquiring activity upon request. The test circuit shall specify the inputs, outputs, biases, and power dissipation, as applicable, in accordance with the intent specified in test method 1015 of MIL-STD-883.

(2) $T_A = +125^\circ\text{C}$, minimum.

b. Interim and final electrical test parameters shall be as specified in table II herein, except interim electrical parameter tests prior to burn-in are optional at the discretion of the manufacturer.

TABLE II. Electrical test requirements.

MIL-STD-883 test requirements	Subgroups (in accordance with MIL-STD-883, method 5005, table I)
Interim electrical parameters (method 5004)	----
Final electrical test parameters (method 5004)	1*, 2, 3, 7, 9, 10, 11
Group A test requirements (method 5005)	1, 2, 3, 4, 7, 8, 9, 10, 11
Groups C and D end-point electrical parameters (method 5005)	1, 2, 3

* PDA applies to subgroup 1.

4.3 Quality conformance inspection. Quality conformance inspection shall be in accordance with method 5005 of MIL-STD-883 including groups A, B, C, and D inspections. The following additional criteria shall apply.

4.3.1 Group A inspection.

a. Tests shall be as specified in table II herein.

b. Subgroups 5 and 6 in table I, method 5005 of MIL-STD-883 shall be omitted.

c. Subgroup 4 (C_{IN} , C_{OUT} , and $C_{I/O}$ measurements) shall be measured only for the initial test and after process or design changes which may affect input capacitance. A minimum sample size of five devices with zero rejects is required.

d. Subgroups 7 and 8 shall verify the functionality of the device.

STANDARD MICROCIRCUIT DRAWING DEFENSE SUPPLY CENTER COLUMBUS COLUMBUS, OHIO 43216-5000	SIZE A		5962-88689
		REVISION LEVEL C	SHEET 25

4.3.2 Groups C and D inspections.

- a. End-point electrical parameters shall be as specified in table II herein.
- b. Steady-state life test conditions, method 1005 of MIL-STD-883.
 - (1) Test condition A, B, C, or D. The test circuit shall be maintained by the manufacturer under document revision level control and shall be made available to the preparing or acquiring activity upon request. The test circuit shall specify the inputs, outputs, biases, and power dissipation, as applicable, in accordance with the intent specified in test method 1005 of MIL-STD-883.
 - (2) $T_A = +125^{\circ}\text{C}$, minimum.
 - (3) Test duration: 1,000 hours, except as permitted by method 1005 of MIL-STD-883.

5. PACKAGING

5.1 Packaging requirements. The requirements for packaging shall be in accordance with MIL-PRF-38535, appendix A.

6. NOTES

6.1 Intended use. Microcircuits conforming to this drawing are intended for use for Government microcircuit applications (original equipment), design applications, and logistics purposes.

6.2 Replaceability. Microcircuits covered by this drawing will replace the same generic device covered by a contractor-prepared specification or drawing.

6.3 Configuration control of SMD's. All proposed changes to existing SMD's will be coordinated with the users of record for the individual documents. This coordination will be accomplished using DD Form 1692, Engineering Change Proposal.

6.4 Record of users. Military and industrial users shall inform Defense Supply Center Columbus when a system application requires configuration control and the applicable SMD. DSCC will maintain a record of users and this list will be used for coordination and distribution of changes to the drawings. Users of drawings covering microelectronics devices (FSC 5962) should contact DSCC-VA, telephone (614) 692-0544.

6.5 Comments. Comments on this drawing should be directed to DSCC-VA, Columbus, Ohio 43216-5000, or telephone (614) 692-0547.

6.6 Pin descriptions.

$\overline{A/B}$ Channel A/channel B select (input). This signal selects the channel in which the read or write operation occurs.

\overline{CE} Chip enable (input, active low). This signal selects the SCC for a read or write operation.

$\overline{CTSA}, \overline{CTSB}$ Clear to send (inputs, active low). If these pins are programmed as auto enables, a low on the inputs enables the respective transmitters. If not programmed as auto enables, they may be used as general-purpose inputs. Both inputs are Schmitt-trigger buffered to accommodate slow rise time inputs. The SCC detects pulses on these inputs and can interrupt the CPU on both logic level transitions.

STANDARD MICROCIRCUIT DRAWING DEFENSE SUPPLY CENTER COLUMBUS COLUMBUS, OHIO 43216-5000	SIZE A		5962-88689
		REVISION LEVEL C	SHEET 26

6.6 Pin descriptions – Continued.

$\overline{D/C}$	Data/control select (input). This signal defines the type of information transferred to or from the SCC. A high means data is transferred, a low indicates a command.
\overline{DCDA} , \overline{DCDB}	Data carrier detect (inputs, active low). These pins function as receiver enables if they are programmed for auto enables; otherwise they may be used as general-purpose input pins. Both pins are Schmitt-trigger buffered to accommodate slow rise time signals. The SCC detects pulses on these pins and can interrupt the CPU on both logic level transitions.
D_0 - D_7	Data bus (bidirectional, three-state). These lines carry data and commands to and from the SCC.
$\overline{DTR/REQA}$, $\overline{DTR/REQB}$	Data terminal ready/request (outputs, active low). These outputs follow the state programmed into the DTR bit. They can also be used as general purpose outputs or as request lines for a DMA controller.
IEI	Interrupt enable in (input, active high). IEI is used with IEO to form an interrupt daisy chain when there is more than one interrupt driven device. A high IEI indicates that no other higher priority device has an interrupt under service or is requesting an interrupt.
IEO	Interrupt enable out (output, active high). IEO is high only if IEI is high and the CPU is not servicing an SCC interrupt or the SCC is not requesting an interrupt (interrupt acknowledge cycle only). IEO is connected to the next lower priority device's IEI input and thus inhibits interrupts from lower priority devices.
\overline{INT}	Interrupt request (output, open-drain, active low). This signal is activated when the SCC requests an interrupt.
\overline{INTACK}	Interrupt acknowledge (input, active low). This signal indicates an active interrupt acknowledge cycle. During this cycle, the SCC interrupt daisy chain settles. When \overline{RD} becomes active, the SCC places an interrupt vector on the data bus (if IEI is high). \overline{INTACK} is latched by the rising edge of PCLK.
PCLK	Clock (input). This is the master SCC clock used to synchronize internal signals. PCLK is a TTL level signal. PCLK is not required to have any phase relationship with the master system clock.
\overline{RD}	Read (input, active low). This signal indicates a read operation and when the SCC is selected, enables the SCC's bus drivers. During the interrupt acknowledge cycle, this signal gates the interrupt vector onto the bus if the SCC is the highest priority device requesting an interrupt.
RxDA, RxDB	Receive data (inputs, active high). These input signals receive serial data at standard TTL levels.
\overline{RTxCA} , \overline{RTxCB}	Receive/transmit clocks (inputs, active low). These pins can be programmed in several different modes of operation. In each channel, RTxC may supply the receive clock, the transmit clock, the clock for the baud rate generator, or the clock for the digital phase-locked loop. These pins can also be programmed for use with the respective \overline{SYNC} pins as a crystal oscillator. The receive clock may be 1, 16, 32, or 64 times the data rate in asynchronous modes.

STANDARD MICROCIRCUIT DRAWING DEFENSE SUPPLY CENTER COLUMBUS COLUMBUS, OHIO 43216-5000	SIZE A		5962-88689
		REVISION LEVEL C	SHEET 27

6.6 Pin descriptions – Continued.

$\overline{\text{RTSA}}$, $\overline{\text{RTSB}}$

Request to send (outputs, active low). When the request to send (RTS) bit in write register 5 is set, the $\overline{\text{RTS}}$ signal goes low. When the RTS bit is reset in the asynchronous mode and auto enable is on, the signal goes high after the transmitter is empty. In synchronous mode or in asynchronous mode with auto enable off, the RTS pin strictly follows the state of the RTS bit. Both pins can be used as general purpose outputs.

$\overline{\text{SYNCA}}$, $\overline{\text{SYNCB}}$

Synchronization (inputs or outputs, active low). These pins can act either as inputs, outputs, or part of the crystal oscillator circuit. In the asynchronous receive mode (crystal oscillator option not selected), these pins are inputs similar to CTS and DCD. In this mode, transitions on these lines affect the state of the synchronous/hunt status bits in read register 0 but have no other function.

In external synchronization mode with the crystal oscillator not selected, these lines also act as inputs. In this mode, SYNC must be driven low two receive clock cycles after the last bit in the synchronous character is received. Character assembly begins on the rising edge of the receive clock immediately preceding the activation of SYNC.

In the internal synchronization mode (monosync and bisync) with the crystal oscillator not selected, these pins act as outputs and are active only during the part of the receive clock cycle in which synchronous characters are recognized. The synchronous condition is not latched, so these outputs are active each time a synchronization pattern is recognized (regardless of character boundaries). In SDLC mode, these pins act as outputs and are valid on receipt of a flag.

TxDA, TxDB

Transmit data (outputs, active high). These output signals transmit serial data at standard TTL levels.

$\overline{\text{TRxCA}}$, $\overline{\text{TRxCB}}$

Transmit/receive clocks (inputs or outputs, active low). These pins can be programmed in several different modes of operation. $\overline{\text{TRxC}}$ may supply the receive clock or the transmit clock in the input mode or supply the output of the digital phase-locked loop, the crystal oscillator, the baud rate generator, or the transmit clock in the output mode.

$\overline{\text{WR}}$

Write (input, active low). When the SCC is selected, this signal indicates a write operation. The coincidence of RD and WR is interpreted as a reset.

$\overline{\text{W/REQA}}$, $\overline{\text{W/REQB}}$

Wait/request (outputs, open-drain when programmed for a wait function, driven high or low when programmed for a request function). These dual-purpose outputs may be programmed as request lines for a DMA controller or as wait lines to synchronize the CPU to the SCC data rate. The reset state is wait.

6.7 Approved sources of supply. Approved sources of supply are listed in MIL-HDBK-103 and QML-38535. The vendors listed in MIL-HDBK-103 and QML-38535 have agreed to this drawing and a certificate of compliance (see 3.6 herein) has been submitted to and accepted by DSCC-VA.

STANDARD MICROCIRCUIT DRAWING BULLETIN

DATE: 02-12-18

Approved sources of supply for SMD 5962-88689 are listed below for immediate acquisition information only and shall be added to MIL-HDBK-103 and QML-38535 during the next revision. MIL-HDBK-103 and QML-38535 will be revised to include the addition or deletion of sources. The vendors listed below have agreed to this drawing and a certificate of compliance has been submitted to and accepted by DSCC-VA. This bulletin is superseded by the next dated revision of MIL-HDBK-103 and QML-38535.
